Cleaning and Sanitisation Regime for Main Winch Drivers

Cleaning and Sanitisation.

To limit the chance of spreading infection and to protect Club staff and members, all surfaces which are touched by different people need to be cleaned regularly with appropriate products.

The recommended cleaning materials and products will be made available at 'cleaning stations' in various locations. These should be used in accordance with manufacturers' recommendations.

Please note that at present, the supply of many of these products is limited so please avoid excessive use or waste. DO NOT remove cleaning materials or products from the 'cleaning stations'.

Hand sanitiser will also be provided at all cleaning stations.

PLEASE follow the cleaning regimes shown below carefully.

Use of Cleaning materials and products.

Products and materials must be used in accordance with the manufacturer's recommendations.

CoSHH information and safety data sheets can be made available on request. For further information e-mail secretary@midlandgliding.club

Items and areas should be cleaned by a "surface wipe" using anti-viral wipes or anti-viral spray and a cloth. When using anti-viral spray, spray the liquid onto the cloth and then wipe the item to be cleaned. DO NOT spray the item and then wipe.

Used cloths or wipes MUST be disposed of in the receptacle provided.

(Note: Please keep in mind that at present, there are shortages of many of the cleaning products required for these tasks. Whilst it is important to ensure that you clean all items thoroughly, please avoid excessive use or waste wherever possible).

Cleaning and Sanitisation - Main Winches and towing vehicles

Responsibility: Main Winch Driver for each session.

At the end of each flying day and at any time when there is change of winch driver, the following areas and items should be cleaned as described above.

Cleaning before the start of any session is at the winch driver's discretion.

- Battery charger leads & their mains socket switches
- Door handles & grab handles (inside & out)
- Window catches
- Master electrics switch
- Bonnet & cable drum cover catches
- Dipstick & filler lids
- Parking brake lever
- Tow hitch & jockey stand handles
- Wedges
- Gas tank covers & filler caps

General cabin interior:

- Radio front panel
- Radio mic
- Ignition key
- Throttle, power setting, drive, brake & guillotine lever handles
- Seat & surrounds

Towing Vehicles:

- Battery charger lead & main socket switch
- Exterior & interior door handles
- Steering wheel, hand brake & gear leavers
- Driver seat & trim in contact with drivers clothing
- Radio fascia & mic
- Tailgate catches
- Cable presses, tools and trace/cable parachute
